

Customer Retention & Churn Analysis

Objective

The objective of this project is to analyze customer churn behavior and identify factors affecting customer retention. The dashboard helps businesses understand why customers leave and provides insights to improve retention strategies.

Dataset

- Dataset: Telco Customer Churn Dataset
- Records: 7043 Customers
- Tool Used: Power BI
- File Format: CSV

Dashboard KPIs

- Total Customers
- Churn Customers
- Contract-wise Churn
- Payment Method-wise Churn
- Customer Churn Distribution
- Customer Tenure Analysis

Key Insights

1. Total Customers

The dataset contains **7,043 customers**.

2. Churn Customers

Approximately **1,869 customers** have churned.

3. Contract Analysis

Customers with **Month-to-Month contracts** have the highest churn rate.

Customers with **One-Year** and **Two-Year contracts** are more likely to stay.

4. Payment Method Analysis

Electronic Check users show comparatively higher churn than customers using other payment methods.

5. Churn Distribution

Most customers are retained, while around one-fourth of customers have churned.

6. Tenure Analysis

Customers with shorter tenure are more likely to churn.

Customers staying longer generally continue using the service.

Recommendations

- Encourage customers to switch from Month-to-Month contracts to long-term contracts.
- Provide loyalty rewards for long-term customers.
- Improve customer support during the initial months.
- Offer discounts to high-risk customers before they leave.
- Monitor customers using Electronic Check payment methods.

Conclusion

The Power BI dashboard provides valuable insights into customer retention and churn patterns. Businesses can use these findings to reduce customer loss, improve customer satisfaction, and increase long-term revenue.
